INTERNSPARK INTERNSHIP

Task 1: Responsive Personal Portfolio Website

Implementation & Submission Report

Student name	Boddu Sahasra Preetam
Task 1	Responsive Personal Portfolio Website
Technologies	HTML5, CSS3, Bootstrap 5, JavaScript
Project folder	Internspark-portfolio

1. Task Objective

The objective of this task is to create a mobile-friendly personal portfolio website with Home, About, Projects, and Contact sections. The website uses HTML, CSS, and Bootstrap, includes a navigation bar with smooth scrolling, and is designed to adapt to desktop, tablet, and mobile screen sizes.

2. Technologies and Features

Technology / feature	Purpose in this project
HTML5	Defines the page structure and sections.
CSS3	Applies colors, typography, spacing, hover effects, and responsive styling.
Bootstrap 5	Provides responsive containers, grid columns, buttons, and a collapsible navbar.
CSS Flexbox	Centers and aligns content in the Home section.
Bootstrap Grid	Arranges skill cards and project cards across screen sizes.
JavaScript	Updates the footer year and closes the mobile menu after a navigation link is selected.
Smooth scrolling	CSS scroll-behavior and section anchor links provide smooth in-page navigation.

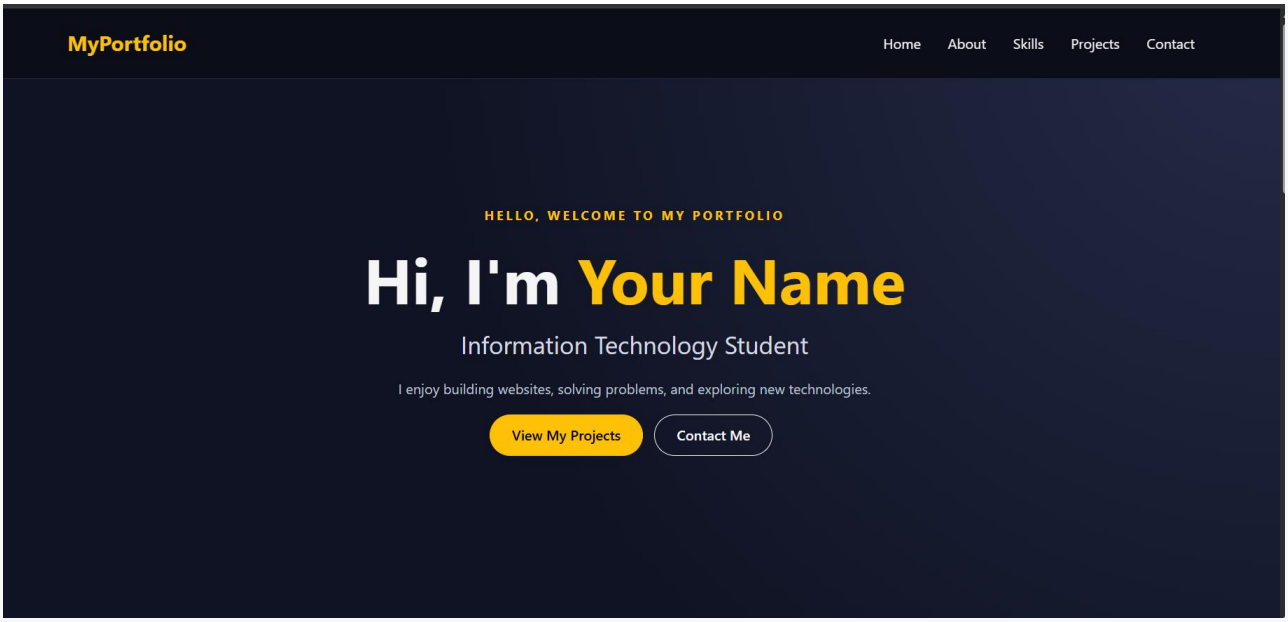

3. Project Files

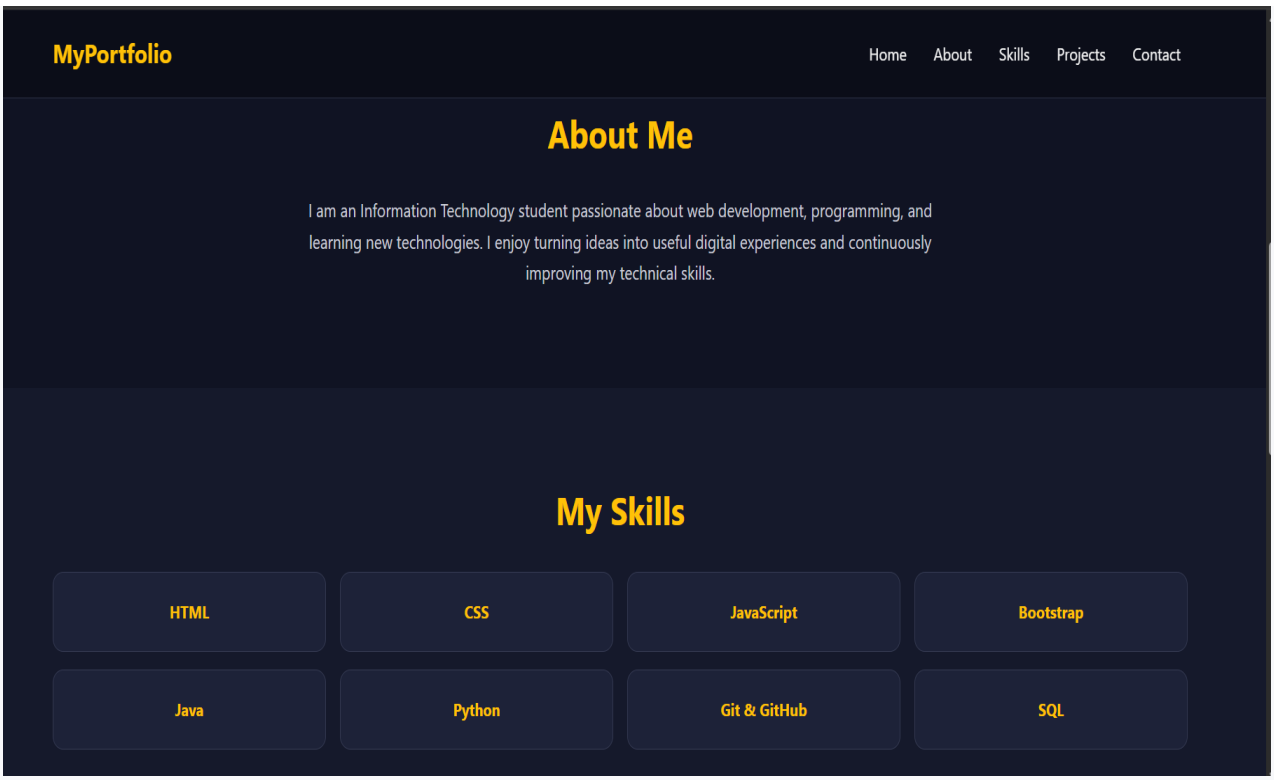

The project folder contains the following files:

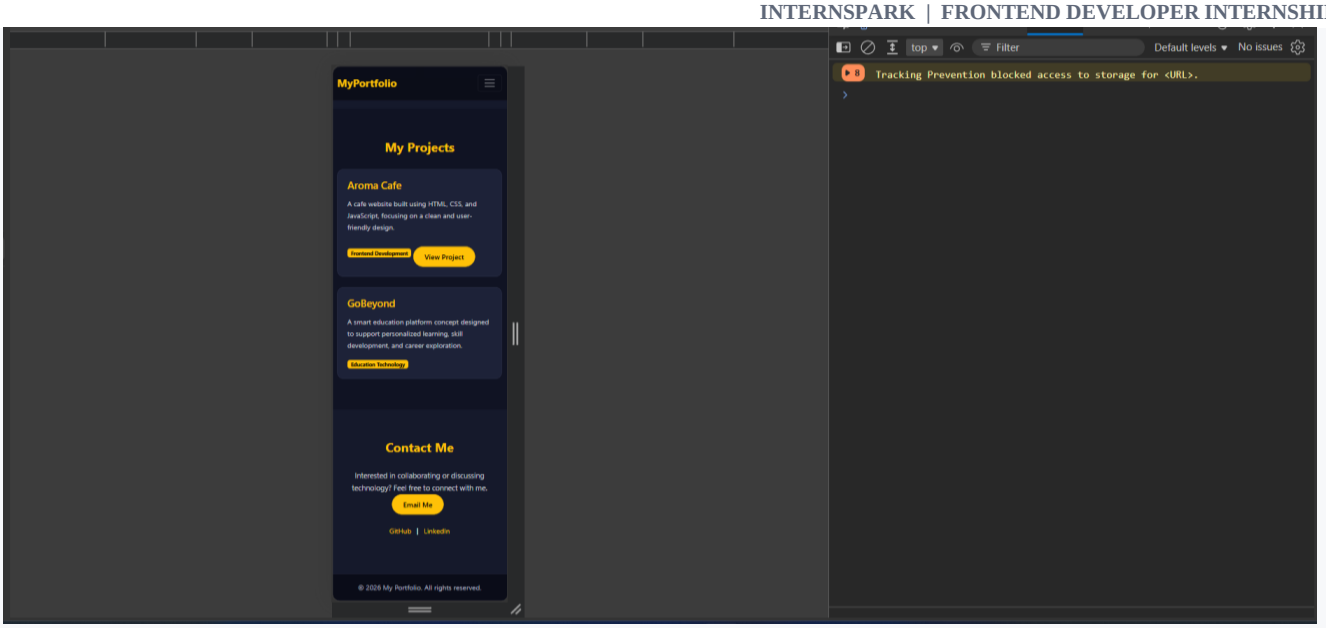

- index.html — page structure, navigation, Home, About, Skills, Projects, Contact, and footer.
- style.css — visual design, card styling, hover effects, and mobile media query.
- script.js — automatic copyright year and mobile navigation behavior.

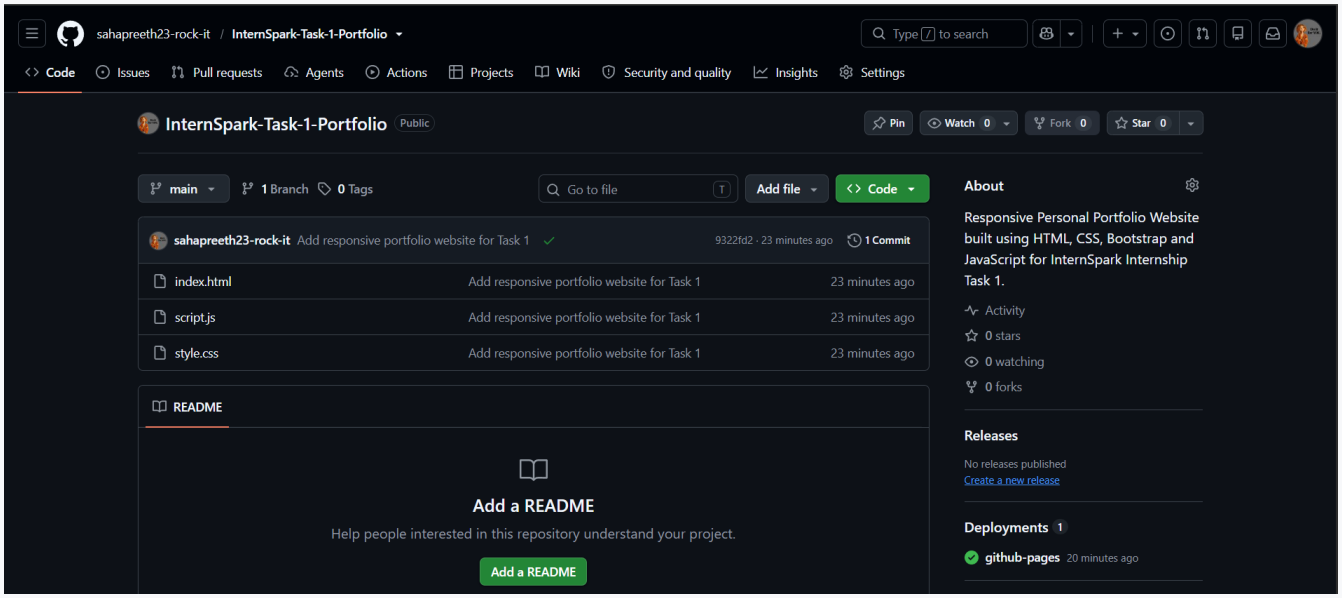

4. Screenshots

Insert actual screenshots from the browser and GitHub in the marked spaces below. Use readable screenshots that show the finished page and the repository contents.

5. Code Snippets

5.1 Bootstrap CSS and custom stylesheet links (from index.html):

```
<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/css/bootstrap.min.css"
      rel="stylesheet">
<link rel="stylesheet" href="style.css">
```

5.2 Responsive Bootstrap grid used for project cards (from index.html):

```
<div class="row g-4">
    <div class="col-md-6">
        <div class="project-card">
            <h3>Aroma Cafe</h3>
            <!-- Project description and link -->
        </div>
    </div>
    <div class="col-md-6">
        <div class="project-card">
            <h3>GoBeyond</h3>
            <!-- Project description and link -->
        </div>
    </div>
</div>
```

5.3 Smooth scrolling and mobile responsive styling (from style.css):

```
* {
    box-sizing: border-box;
    scroll-behavior: smooth;
    scroll-padding-top: 75px;
}

@media (max-width: 768px) {
    .section-padding {
        padding: 70px 0;
    }

    .navbar-collapse {
        padding-top: 15px;
    }
}
```

5.4 JavaScript behavior (from script.js):

```
document.getElementById("year").textContent =
    new Date().getFullYear();

const navLinks = document.querySelectorAll(".navbar-nav .nav-link");
const navbarMenu = document.getElementById("navbarMenu");

navLinks.forEach(function (link) {
    link.addEventListener("click", function () {
        if (navbarMenu.classList.contains("show")) {
            const menu = bootstrap.Collapse.getOrCreateInstance(navbarMenu);
            menu.hide();
        }
    });
});
```

6. Git and GitHub Commands

The following commands are the standard workflow used to initialize the local repository, stage the three website files, commit them, and push the main branch to GitHub. Keep only the commands that were actually run; remove or amend any command that differs from your workflow.

```
git init
git add index.html style.css script.js
git commit -m "Add responsive portfolio website for Task 1"
git branch -M main
```

```
git remote add origin https://github.com/<YOUR-USERNAME>/InternSpark-Task-1-Portfolio.git
git push -u origin main
```

If the repository was already initialized or the remote already existed, do not repeat those commands; use the commands appropriate to the existing repository.

7. Project Links

GitHub repository	https://github.com/sahapreeth23-rock-it/InternSpark-Task-1-Portfolio
Live hosted website	https://sahapreeth23-rock-it.github.io/InternSpark-Task-1-Portfolio/

8. Testing Checklist

☐Navigation links open the matching page sections.

☐Smooth scrolling works when navigating between sections.

☐Bootstrap mobile navigation opens and closes correctly.

☐Skills and project cards fit the screen at mobile, tablet, and desktop widths.

☐No unwanted horizontal scrolling appears on narrow screens.

☐The GitHub repository contains index.html, style.css, and script.js.

☐The deployed GitHub Pages URL opens successfully.

9. Conclusion

The portfolio is structured using HTML, styled with CSS, and enhanced with Bootstrap and JavaScript. The project includes anchor-based navigation, responsive grid layouts, a mobile navigation menu, and sections for introducing the developer, listing skills and projects, and providing contact information. Final submission should include actual screenshots, the confirmed repository URL, and the verified live website URL.
